

PEARLESCENT GLAZE

Fact sheet

ANNIE SLOAN

PEARLESCENT GLAZE

Add a shimmering pearl effect to painted furniture

Pearlescent Glaze is a water based light-reflecting decorative finish suitable for use on indoor furniture, walls and floors – whether painted or unpainted. Pearlescent Glaze will give a sublime, high-end, lustrous finish. Apply over Chalk Paint® for a more intense opalescence or mix with very small additions of Chalk Paint® to create gently shimmering, translucent shades. Pearlescent Glaze gives a durable finish, similar to Lacquer.

Getting Started

Mix well to disperse pearlescent particles before use. Always paint a test patch in several areas before starting your project. Ensure the surface you're working on is dry and dust-free. For best results use over dry Chalk Paint®. Apply one or two coats with an Annie Sloan Flat Brush or for detailed

patterned work use an Annie Sloan Detail Brush. To create a smoother finish apply using an Annie Sloan Sponge Roller or a paint sprayer.

For detailed work apply Chalk Paint® Lacquer over Chalk Paint® before applying Pearlescent Glaze. This ensures that the entire piece of furniture is protected. Alternatively, use Chalk Paint® Wax after applying Pearlescent Glaze details. Simply make sure to wipe excess wax away from glazed areas to keep the finish bright. Each tin will cover approximately 65 ft². Coverage is 258 ft² per 33.8 US fl oz depending on surface and application. Drying time is approximately 2 hours depending on conditions. Pearlescent Glaze is not suitable for outdoor use.

Tips & Tricks

- * Use to highlight mouldings, corncicing, and carvings. The light reflective attributes of Pearlescent Glaze will catch the eye and gently emphasize structural details.
- * Brush strokes and marks will be accentuated due to the light reflective qualities of the glaze.
- * If using in high-traffic areas (e.g kitchens or floors) apply a coat of Chalk Paint® Lacquer over the glaze for extra protection.
- * **PEARLESCENT ON LIGHT CHALK PAINT®** (photo left). Apply over light Chalk Paint® colours such as Old White for the most intense pearlescent results. Two solid coats ensures best effects and

sufficient protection without the need for Chalk Paint® Wax or Lacquer.

* TO MIMIC BONE INLAY (photo middle).

- apply your Chalk Paint® base colour
- paint bone inlay pattern with Chalk Paint® in Old White using a small Annie Sloan Detail Brush
- layer Pearlescent Glaze over the Old White markings
- apply Clear Chalk Paint® Wax and wipe excess away

* TINT WITH CHALK PAINT®

(photo right). Create an unlimited spectrum of opaline shades by adding a tiny amount of Chalk Paint® in the colour of your choice to the Pearlescent Glaze. Adding too much Chalk Paint® will reduce the pearlescent effect, so be economical!

Aftercare

Immediately wash your brushes or rollers in warm soapy water. To protect your pearlescent finish, gently clean with a damp cloth using mild soapy water. Avoid regular use of harsh chemicals. Re-apply as and when necessary. For best results use Pearlescent Glaze within one year of purchase.
